**HERCULES
GAS FLOOR
FURNACE**

FOR FASTER, ECON HERCULES

Comfort—

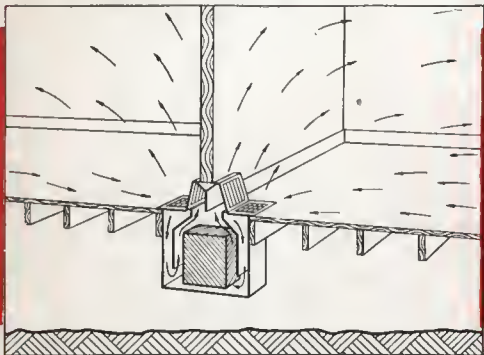

The Hercules Gas Floor Furnace gives instant heat—and plenty of it. Easily regulated to give you the temperature desired, to assure you and your family healthful comfort in the variable temperatures of spring, autumn and winter.

Cleanliness—

A clean home is a healthier home! Clean heat is yours with a Hercules Gas Floor Furnace. Never any dirt or dust—no coal to handle—no ashes! Saves you additional money by eliminating costly household cleaning bills. It makes life easier.

OMICAL PIPELESS H GAS FLOOR

Economy—

The Hercules Gas Floor Furnace provides heat only when you need it. No fuel to waste building up a fire—or “banking” it. It costs little to buy and install, and its efficient, safe, quiet operation is approved by the American Gas Association.

Safety—

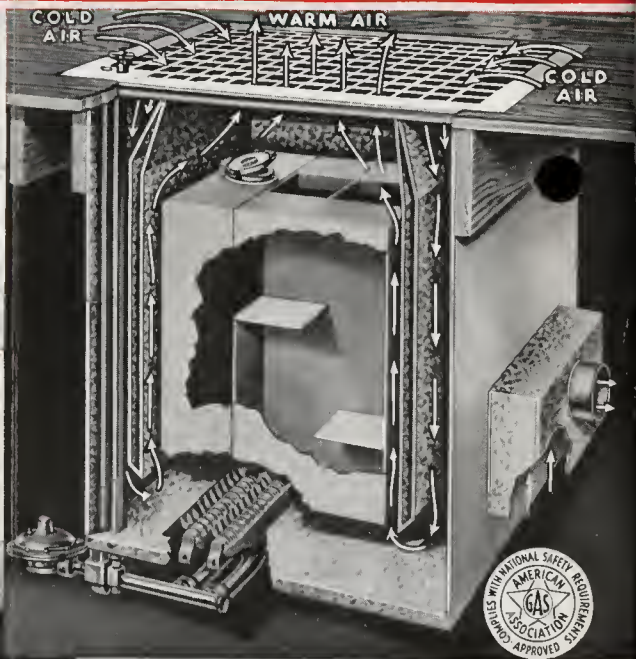

The American Gas Association designates the Hercules as “100% safe.” The Automatic Pilot Control automatically turns off gas when pilot light goes out. Vents carry burned gases to the outside, assuring you protection from monoxide gases.

for any

The Hercules Gas Floor Furnace gives heat instantly and economically. Complete circulation of warm air in a room is maintained as the Hercules Floor Furnace draws the cold air from the floor down into the furnace where it is heated and discharged up through the warm air section of the grille. The Hercules Floor Furnace assures Health and Comfort because it is a *vented heater*. All the products of combustion are carried out through a vent pipe, leaving the warm air free from monoxide gases.

BRIEF *Facts* ABOUT

HERCULES GAS FLOOR FURNACE *Construction*

Combustion Chamber and Radiator—Welded of 18-gauge copper bearing steel to form a gas-tight chamber. Baffles force gas through a tortuous path for high efficiency.

Burner—Cast iron slotted atmospheric type burner. The best burner for this purpose.

Manual Control—Gas cock and pilot cock operated by extension rods that are flush with register and are turned with a key. Pressure reducing valve reduces gas pressure before releasing gas to burner.

Automatic Control—Furnace can be equipped with built-in thermostat and safety pilot to make operation completely automatic. This maintains a uniform, comfortable room temperature at all times and insures absolute safety.

Floor Register—Floor register is fabricated of steel; gives maximum area for passage of air.

Casing—Casing constructed of galvanized iron, double wall provides separation of cold air and warm air space for better insulation.

Down Draft Diverter—Down draft diverter prevents accidental blowing out of pilot light—and adjusts draft to correct proportions.

Lighter Door—Lighter door is made of cast iron with mica insert and can be operated with lighter rod without removing floor register.
